1.5 Intended use

CLEARPOINT® filters and accessories
The CLEARPOINT® 3eco coalescing filter, also referred to as filter below, is used for the filtration of aerosols and solid particles in compressed gas systems.

Any use of this system other than the use described in this manual is hereby deemed to be non-intended and can cause a hazard for the safety of people and the environment.

- Only use filters and accessories within the operating parameters given in the technical data and the agreed delivery conditions.
- Only use filters and accessories within a pipeline system designed for the technical data with appropriate connections, pipe diameters and assembly clearance.
- Only use the filters and accessories for the treatment of compressed gases of fluid group 2 according to Pressure Equipment Directive 2014/68/EU which are free of aggressive and corrosive components.
- Only use filters and accessories in non-explosive hazardous areas.
- Only use filters and accessories away from direct solar radiation and heat sources as well as areas subject to frost.
- Only combine the filters and accessories with the products named and recommended by BEKO TECHNOLOGIES GMBH in the manual.

Before using the filters, the operating company must make sure that all conditions and prerequisites for intended use are given.

The filter is exclusively designed for stationary use in a commercial or industrial area. All the assembly, installation, operation, disassembly and disposal work described may only be performed by qualified skilled personnel.
1.6 Resonably foreseeable inappropriate use

Reasonably foreseeable inappropriate use is deemed to have occurred if the filter or any accessories are used in any other way than that described in the chapter "Intended use". Reasonably foreseeable inappropriate use includes the use of the product in a manner not intended by the manufacturer or supplier but which may result from foreseeable human behaviour.

Reasonably foreseeable inappropriate use includes:

• Executing of modifications of all kinds, in particular design and process engineering interventions, as these can lead to personal injury and material damage as well as functional and operational malfunctions and device failure.
• The overriding, bridging or non-application of existing or recommended safety devices.
• The use for treatment of compressed gases which are not included in fluid group 2 in accordance with PED 2014/68/EU or contain aggressive components. In cases of doubt a gas/condensate analysis must be carried out.

This list is not exhaustive as not all possible inappropriate use can be foreseen in advance. If the operating company is aware of any inappropriate use of the filter or accessories which are not listed here, the manufacturer must be informed immediately.

1.7 Legal warranty and liability for property defects

The owner and operator must take into account the intended use. The owner and operator will be completely liable for every not described action and utilisation which exceeds the stated intended use.

All liability or warranty claims will be invalidated insofar as the filter is not operated according to the intended use or is operated outside the limits specified in the technical data.

This includes:

• incorrect technical installation, commissioning, servicing, maintenance or operation
• the use of defective components
• non-compliance with the safety-relevant information, action steps and instruction contained in this manual
• the performance of any kind of modification, in particular constructive and process technology interventions on the product
• the use of third-party spare parts or accessories, which have not been approved by the manufacturer, during maintenance and repair work
• Non-compliance with servicing, maintenance and inspection intervals
1.8 Target group and personnel

This manual addresses the specialist personnel listed below who are involved with work on the filter or the accessories.

<table>
<thead>
<tr>
<th>INFORMATION</th>
<th>Personnel requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The personnel may not execute any actions on the filter or the accessories when they are under the influence of drugs, medications, alcohol or other substances that may impair their consciousness.</td>
</tr>
</tbody>
</table>

**Skilled personnel- Transport and storage**

Skilled personnel - Transport and storage are people who, due to their training, professional experience and qualifications, have all the necessary skills to safely execute all actions in connection with the transport and storage of the operating material, to instruct, to recognise possible dangerous situations independently and to execute measures to avoid danger.

Skills include experience with hoists, forklifts and lifting equipment and knowledge of local laws, standards and guidelines relating to transport and storage.

**Qualified personnel - compressed gas technology**

Skilled personnel - compressed gas technology are people who, due to their training, professional experience and qualification, possess all the necessary capabilities to safely execute actions, and instruct all actions related to compressed gases and pressurised systems, to independently foresee potential hazardous situations and implement appropriate measures to avert any danger.

The capabilities include, in particular, experience in handling measurement and control technology as well as knowledge of the regionally applicable laws, standards and regulations for compressed gas technology.

1.9 Responsibility of the owner

The responsible owner must ensure the following to prevent accidents, incidents and adverse effects on the environment:

- Before all actions, check to ensure that the manual available does in fact belong to the product.
- Always use, maintain and service the product properly.
- All applicable statutory requirements, safety regulations and accident prevention regulations have been adhered to.
- All regulations and operation manual for safe working and information regarding behaviour in the event of accidents and fires at the operating location are accessible to personnel at all times.
- The product is used with recommended and functioning safety devices that are not overridden.
- Always have assembly, installation and maintenance work carried out by qualified skilled personnel only.
- Personnel have the recommended personal protective equipment at their disposal and it is used.
- Appropriate technical safety measures have been implemented to ensure that the permissible operating parameters are not exceeded or undershot.
2. Safety-related information

2.1 General instructions

Safety instructions warn against residual risks when handling the product. Warning notices in the instructional text precede the procedure that poses a hazard to personnel or the environment. These safety and warning notices must be strictly observed in order to prevent accidents, personal injury, damage to property and impairments during operation.

Structure of the safety instructions

The content of the safety instructions is based on the SAFE principle:

- **S** - Safety symbol and signal word
- **A** - Type and source of danger
- **F** - Possible consequences of disregarding the danger in the order of its severity
- **E** - Measures to prevent danger

Structural design of the safety instructions:

<table>
<thead>
<tr>
<th>SIGNAL WORD</th>
<th>Type and source of danger!</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>Possible consequences if the danger is ignored</td>
</tr>
<tr>
<td>Safety symbol</td>
<td>• Measure to prevent the danger</td>
</tr>
</tbody>
</table>

Signal words according to ISO 3864 and ANSI Z.535.6

- **DANGER**
  - Imminent danger
  - Consequences of non-compliance: Death or serious personal injury

- **WARNING**
  - Imminent danger
  - Consequences of non-compliance: Death or serious personal injury are possible

- **CAUTION**
  - Potential danger
  - Consequences of non-compliance: injury and/or damage to property

- **NOTE**
  - Additional notes, information, tips
  - Consequences of non-compliance: Disadvantages during operation, actions and maintenance.
  - No danger to people or regarding the safe operation.
2.2 Safety instructions

In order to prevent accidents, personal injury and damage to the device as well as impairments during operation, it is essential to adhere to the specified safety and warning notices.

The personal protective equipment specified in the safety instructions must be selected and made available by the operating company depending on the system parameters and properties.

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Operation of plant outside the permissible limit range!</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Operation of the product outside the permissible limits and operating parameters, unauthorised intervention and modifications may result in death or serious injury.</td>
</tr>
<tr>
<td></td>
<td>• For safe operation of the product, always adhere to the limit values, operating parameters and maintenance intervals as well as the set-up and ambient conditions specified on the type plate and in the manual.</td>
</tr>
<tr>
<td></td>
<td>• Inspect whether the operating parameters have been amended or restricted by the use of accessories.</td>
</tr>
<tr>
<td></td>

<td></td>
</tr>
</tbody>
</table>
4. Product information

4.1 Product description

CLEARPOINT® 3eco coalescing filters are used for the filtration of aerosols and solid particles in compressed gas systems. Depending on the requirements, filter elements with different filtration stages can be used to achieve the required compressed air class in accordance with ISO 8573-1. The condensate accumulated during filtration can be discharged manually or automatically.

4.2 Product overview

The filter is made up of the following components:

<table>
<thead>
<tr>

4.3 Product identification

The product designation is shown on the type plate and made up of numbers and letter codes. Each code stands for a filter component and is divided into the following categories:

[1] = Size: Housing
[3] = Attachment components top
[4] = Attachment components bottom

The product designation is explained below using the example “S040CWF”:

![Diagram of product identification]

4.4 Function description

4.4.1 Filtration

With the CLEARPOINT® 3eco coalescing filter, the medium flows through the filter element from the inside to the outside. Compressed gas flows into the filter element from where it flows through the filter element into the filter vessel. During this process, particles as well as oil and water aerosols are separated by the filter material. The liquid components in the filter material move downwards due to gravity, drip off and collect at the base of the filter vessel. From there, they are drained off automatically or manually. Over time, particles become deposited in the filter material. This results in an increase in flow resistance (differential pressure) of the filter element.

The particle charge or degree of pollution of the filter element can be read off using a differential pressure gauge. More detailed information about this can be found in the installation and operation manual enclosed with the differential pressure gauge.
4.4.2 Condensate discharge through float drain

Float drains are mechanical condensate drains that work automatically as they are closed and opened based on the buoyancy of a float body [1]. When the condensate [2] in the vessel rises to a certain level, buoyant force pushes the float body [1] up and opens the outlet channel [3] for the condensate. The float body closes again when the condensate [1] drops to below a certain level. A small amount of condensate remains in the vessel.

Two different float drains are used for discharging the condensate:

- Open when pressureless ([NO] normally open) - at operating pressure \( \leq 0.5 \text{ bar(g)} \) the float drain opens
- Closed when pressureless ([NC] normally closed) - the float drain remains closed even at operating pressure 0 bar(g)

Both types of drain are delivered with the position >>Automatic discharge<< from the factory. The knurled screw is screwed downwards as far as it will go.

To test the discharge function or relieve the pressure on the filter during maintenance work, the float drain can be set to the position >>mechanically open<<. Screw the knurled screw anti-clockwise (left-hand thread) upwards as far as it will go.

<table>
<thead>
<tr>
<th>INFORMATION</th>
<th>Condensate discharge!</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Condensate discharge depends on the product combination and can vary.</td>
</tr>
</tbody>
</table>

For further information on possible product combinations see “4.3 Product identification” on Page 14.
4.4.3 Condensate discharge through BEKOMAT

Condensate discharge can also take place via the automatic BEKOMAT® condensate discharge. More detailed information can be found in the installation and operation manual for the BEKOMAT®.

4.5 Scope of delivery

The following table shows the scope of delivery of the filter.

<table>
<thead>
<tr>
<th>Figure</th>

<tbody>
<tr>
<td><img src="image" alt="Info" /></td>
<td>The scope of delivery can vary depending on the product combination.</td>
</tr>
</tbody>
</table>

For further information on possible product combinations see “4.3 Product identification” on Page 14.
4.6 Type plate

The type plate contains the identification and operating parameters of the filter and is located on the housing. If you contact the manufacturer or supplier, always have this data ready for system identification.

**Example:**

<table>
<thead>
<tr>
<th>Position on rating plate</th>

</tbody>
</table>

**NOTE**

Never damage, remove or make the type plate illegible.

For more information regarding the symbols printed on the type plate, see “1.4 Explanation of the symbols and pictograms utilised” on Page 5.
4.7 Filter element sticker

The filter element can be identified on the basis of a sticker on the base of the filter element. There are different filter elements for different applications and degrees of filtration.

![Sticker on the base of the filter element](image1)

<table>
<thead>
<tr>
<th>Position no.</th>

7. Assembly

7.1 Warning

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Use of incorrect spare parts, accessories or installation materials!</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Symbol]</td>
<td>The use of incorrect spare parts, accessories or installation materials, as well as auxiliary and operating materials, may result in death or serious injury. In addition, functional and operational malfunctions or material damage can occur.</td>
</tr>
<tr>
<td>- For all installation, servicing and maintenance work, only use undamaged original parts, auxiliary and operating materials which are specified by the manufacturer.</td>
<td></td>
</tr>
<tr>
<td>- Only use fittings and connecting elements approved for the respective application as well as suitable tools in perfect operating condition.</td>
<td></td>
</tr>
<tr>
<td>- Only use pipes that are free of dirt, damage and corrosion.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DANGER</th>
<th>Pressurised system!</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Symbol]</td>
<td>Death or serious personal injury can result through contact with fast or suddenly escaping compressed air or through bursting system parts.</td>
</tr>
<tr>
<td>- All work on the system must be carried out in the depressurised state and with the system secured against unintentional pressure build-up.</td>
<td></td>
</tr>
<tr>
<td>- Set up a safety zone around the system during all assembly, installation, maintenance and repair work.</td>
<td></td>
</tr>
<tr>
<td>- Before applying pressure to the system, check all pipe connections and tighten if necessary.</td>
<td></td>
</tr>
<tr>
<td>- Slowly pressurise the system with compressed gas.</td>
<td></td>
</tr>
<tr>
<td>- Avoid pressure blows and high differential pressures.</td>
<td></td>
</tr>
<tr>
<td>- Assemble all pipes without mechanical stress. Avoid any vibrations occurring in the pipe network by using vibration dampers.</td>
<td></td>
</tr>
<tr>
<td>- The pipes must be able to bear the additional weight of the filter. Additional fixings must be mounted if necessary.</td>
<td></td>
</tr>
<tr>
<td>- Always keep exactly to the installation and operating instructions given in this manual.</td>
<td></td>
</tr>
<tr>
<td>- Always keep inspection and maintenance interval exactly.</td>
<td></td>
</tr>
<tr>
<td>- Install fixed pipes as supply and discharge pipes.</td>
<td></td>
</tr>
<tr>
<td>- Do not carry out any structural changes to the product.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>WARNING</th>
<th>Insufficient qualification!</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Symbol]</td>
<td>Insufficient qualification of the personnel can lead to accidents, personal injury and damage to the device as well as impairments during work on the operating material.</td>
</tr>
<tr>
<td>- All work on the product may only be carried out by appropriately qualified skilled personnel.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>Inappropriate assembly!</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Warning Symbol]</td>
<td>Inappropriate assembly of the product can lead to personal injury and product damage as well as impair operation.</td>

Prepare installation

1. Remove the dust cap from the following threads:
   • Inlet and outlet on the filter head
   • Condensate drain on the filter base

2. Depressurise the pipelines or relevant pipe section.

3. Heed the filter dimensions and make sure there is sufficient space for assembly.

4. Pipes must be able to bear the additional weight of the filter. Additional fixings must be mounted if necessary.

5. Pipes must be free of contamination and corrosion. Check pipe thread for damage. Defective pipes must be replaced immediately.

6. Pipes must be free of mechanical stress and corrosion. Compensate any vibrations which occur by using vibration dampers.

7. Only use fittings which are suitable for this pressure and temperature range. The pipe threads must match those of the filter head.

8. Execute the condensate drain in such a way that no compressed gas or condensate can escape to the surrounding of the filter. The condensate to be discharged should be routed to a treatment system conforming to law (e.g. ÖWMAT® or BEKOSPLIT®).
The direction of flow of the filter must be taken into account during assembly. It must be adapted to the direction of flow in the pipe.

The housing head and the housing body are equipped with a double-start trapezoidal thread. The direction of flow of the filter can be adapted to the direction in the pipe by turning the housing head through 180°. The direction of flow is indicated by arrows [2] and a raised marking [3] on the housing head. These must be aligned as shown. The safety slide [1] must always be in an easily accessible position on the front.

The fitting of a bypass pipe [4] and corresponding shut-off valves [5] is recommended for maintenance and servicing work.

1. Apply sealing material e.g. PTFE-tape (EN 837-2) to the pipe ends
2. Screw the pipe thread into the filter inlet until the connection is firm and leak-tight
3. Screw the pipe thread into the filter outlet until the connection is firm and leak-tight

After assembly work has been finished, it must be checked whether the housing body has been screwed in properly, the safety slide pushed up and the safety screw tightened hand-tight. A leakage test should be carried out to check the assembly work. For additional information, refer to “9.6 Leakage test” on Page 39.
8. Commissioning

8.1 Commissioning tasks

For commissioning to be carried out, the following prerequisites must be fulfilled and the preparatory tasks must have been completed.

</tbody>
</table>
9.2.2 Cleaning work

For cleaning to be carried out, the following prerequisites must be fulfilled and the preparatory tasks must have been completed.

<table>
<thead>
<tr>
<th>Tools</th>
<th>Material</th>
<th>Protective equipment</th>
</tr>
</thead>
</table>
| None  | Mild detergent  
        | Cotton cloth or disposable tissue | Protective gloves (fluid-resistant)  
        | Safety goggles with side shields  
        | Hearing protection  
        | Respiratory protection, protection class FFP 3  
        | Safety footwear |

To clean the filter, use a damp (but not wet) cotton cloth or disposable tissue and a mild conventional detergent or soap.

1. Spray a little detergent onto the clean cotton cloth or disposable tissue.
2. Wipe down the entire surface of the component.
3. Then dry using a clean cloth or let it dry at room temperature.

9.3 Visual inspection

During the visual inspection of the filter, all components must be inspected for mechanical damage and corrosion. Any damaged components must be replaced immediately.
9.4 Replace the float drain

For float drain replacement to be carried out, the following prerequisites must be fulfilled and the preparatory tasks must have been completed.

<table>
<thead>
<tr>
<th>Prerequisites</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tools</strong></td>
</tr>
<tr>
<td>• Screwdriver - cross-head size 2.5 mm</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

**Preparation of installation**

1. Open the bypass pipe if available

**Figure**

1. Close the shut-off valves upstream and downstream of the filter or the respective system section

2. Set the knurled screw on the float drain anti-clockwise (left-hand thread) from "Automatic discharge" to "Mechanical open"
3. Undo the locking screw on the safety slide
4. Push the safety slide downwards

5. Unscrew the housing body
6. Pull the housing body down and off

To screw the float drain out, use the size 13 adapter enclosed with the float drain.
7. Use the adapter to screw the float drain out anti-clockwise
8. Lift the float drain out of the top of the housing body
9. Dispose of the float drain properly and in line with the regional requirements.

For more information, see “12. Disposal” on Page 44.

10. Insert a new float drain into the housing body

11. Screw the float drain into the housing body clockwise by hand

12. Tighten the float drain using the adapter
13. Screw the housing body back onto the filter head. Make sure that the safety slide is facing the front after assembly.

14. Push the safety slide upwards.
15. Tighten the locking screw on the safety slide.

16. Slowly open the shut-off valves upstream and downstream of the filter or the respective system section.

17. Set the knurled screw on the float drain anti-clockwise (left-hand thread) from “Mechanically open” to “Automatic discharge” by unscrewing the knurled screw as far as it will go.
9.5 Replace the filter element

For filter element replacement to be carried out, the following prerequisites must be fulfilled and the preparatory tasks must have been completed.

<table>
<thead>
<tr>
<th>Prerequisites</th>
<th>Tools</th>
<th>Material</th>
<th>Protective equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Screwdriver - cross-head size 2.5 mm</td>
<td>• New filter element</td>
<td>• Protective gloves (fluid-resistant)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Safety goggles with side shields</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Hearing protection</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Respiratory protection, protection class FFP 3</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• Safety footwear</td>
</tr>
</tbody>
</table>

Preparation of installation

1. Open the bypass pipe if available

<table>
<thead>
<tr>
<th>Figure</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Figure 1" /></td>
<td>1. Close the shut-off valves upstream and downstream of the filter or the respective system section and depressurise the filter</td>
</tr>
<tr>
<td><img src="image2.png" alt="Figure 2" /></td>
<td>2. When the BEKOMAT® is used, it must be disconnected from the filter base. For further information see the enclosed installation and operating manual for the BEKOMAT®</td>
</tr>
</tbody>
</table>
3. Undo the locking screw on the safety slide
4. Push the safety slide downwards
5. Unscrew the housing body
6. Pull the housing body down and off
7. Pull the used filter element down and out of the housing head
8. Insert a new filter element in the housing head. The direction of flow indicated on the housing head and the filter element base must match.

9. Screw the housing body to the housing head. Make sure that the safety slide is facing the front.

10. Push the safety slide upwards.

11. Tighten the locking screw on the safety slide.
12. When the BEKOMAT® is used it must be reconnected
For further information see the enclosed installation and operating manual for the BEKOMAT®

13. Slowly open the shut-off valves upstream and downstream of the filter or the respective system section

9.6 Leakage test

The leakage test is a non-destructive test method and is used to prove leak tightness in vacuum and overpressure systems. The leakage test can be carried out in different ways. BEKO TECHNOLOGIES GMBH does not make a specific recommendation here. The company operating the compressed gas system is responsible for the selection and specification of the test method to be used, which should be carried out in accordance with valid standards and regulations (e.g. DIN EN 1779).
10. Shut down

<table>

</tr>
<tr>
<td></td>
<td>• Dispose of all parts and components, operating and auxiliary materials as well as cleaning media professionally and in accordance with regional legal provisions, regulations and requirements.</td>
</tr>
<tr>
<td></td>
<td>• In case of uncertainties regarding disposal, always consult a regional waste management company.</td>
</tr>
</tbody>
</table>

12.2 Disposal work

At the end of its useful life, the product must be disposed of properly e.g. by a specialist company. Materials as glass, plastics and some chemical compounds are mostly recoverable, reusable, or recyclable.

All national and local regulations must be kept during disposal.

**Used filter element:**
Waste key: 150203
Adsorption and filter materials; cleaning wipes and protective clothing with the exception of those classified by 150202

**Used float drain**
Do not dispose of as household waste! Disposal must be carried out properly and in line with environmental requirements.

## 14. Troubleshooting / FAQ

<table>
<thead>
<tr>
<th>Error or fault pattern</th>
<th>Possible causes</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| Poor compressed gas quality | Excessive load, load surges | • Change operating method  
• Avoid pressure surges  
• Observe the prescribed operating parameters, particularly during start-up processes |
| | Non-functioning condensate discharge | • Guarantee regular condensate discharge |
| | Incorrect dimensioning | • Dimension the filter according to the given operating parameters and replace if necessary |
| | Filter element installed incorrectly | • Watch direction of flow / direction of installation of the filter element |
| | O-ring has been damaged during installation | • Procure new filter element and O-ring, proceed with care during installation |
| High differential pressure | Incorrect dimensioning | • Dimension the filter according to the given operating parameters and replace by larger one if necessary |
| | Excessive contamination | • Shorten the maintenance interval for filter element replacement  
• Filtration in stages may be necessary |
| | Filter elements destroyed | • Change in operating method  
• Filtration in stages may be necessary |
| Condensate in downstream components | Condensate discharge defective or malfunctioning | • Replace float drain or carry out maintenance on BEKOMAT® |
| | Cooling downstream of filtration section | • Drying upstream of filtration required |
| Leakage | Ageing seals | • Replace seals within the context of maintenance work |
| | Mechanical damage | • Send in the filter for repair or replace by a new one |

Herstellererklärung

Wir erklären hiermit, dass die nachfolgend bezeichneten Produkte, in den von uns gelieferten Ausführungen gemäß Druckgeräterichtlinie 2014/68/EU Artikel 4 Absatz 3 in Übereinstimmung mit der geltenden guten Ingenieurpraxis ausgelegt und hergestellt werden.

Produktbezeichnung: Behälter für Gewindefilter
Typbezeichnung: CLEARPOINT
Baugröße: S040, S045, S050, S055, S075, S100, M010, M012, M015, M018
Max. Betriebsdruck: 16 bar
Beschreibung der Druckgeräte: Druckgeräte für Fluide der Gruppe 2

Druckgeräte nach Artikel 4 Absatz 3 der Druckgeräterichtlinie 2014/68/EU dürfen nicht die in Artikel 19 genannte CE-Kennzeichnung tragen.

Neuss, 30.07.2019

Manufacturer Declaration

We hereby declare that the products indicated hereafter, in the condition in which they have been placed into circulation, have been designed and manufactured according to sound engineering practice, in compliance with Article 4, Paragraph 3 of the European Pressure Equipment Directive 2014/68/EC.

Product designation: Vessel for threaded filter
Model designation: CLEARPOINT
Construction size: S040, S045, S050, S055, S075, S100, M010, M012, M015, M018
Max. operating pressure: 16 bar

Description of the pressure equipment: Pressure equipment for fluids of Group 2

Pressure equipment according to Article 4, Paragraph 3 of the European Pressure Equipment Directive 2014/68/EC must not bear the CE marking referred to in Article 19 of the above Directive.

The vessel was subjected to a hydraulic pressure test with 23 bar and a leakage test with a compressed air media at 7.0 bar. The vessel passed both tests successfully and no defects were detected.
