

Condensate technology | BEKOMAT[®] 20 | 20 FM

Get a grip on condensate: protect resources and boost efficiency with the BEKOMAT[®]

During compressed air generation and processing, the optimum quality for the application should be achieved. It is important to remove contaminants and humidity from the compressed air as these can lead to quality problems, failures or loss of production.

Condensate discharge without compressed air loss

The BEKOMAT[®] drains off condensate without loss of compressed air, thus reducing energy costs and CO_2 emissions. This is made possible by the integrated capacitive sensor, smart electronics for volume-controlled condensate discharge and a special discharge diaphragm.

The BEKOMAT® for filters and water separators

The BEKOMAT[®] 20 is a sturdy condensate drain designed for use in water separators, filters and similar equipment. It is suitable for oil-lubricated plants as well as oil-free compressors.

The control panel is accessible from the top and the front. It has a plastic housing with integrated aluminium condensate container.

The BEKOMAT[®] 20FM with integrated filter management (filter service life monitor and indicator) is a costeffective monitoring solution for the connected filter element.

- > No compressed air lost during draining
 - > Low operating costs

> Outstanding reliability

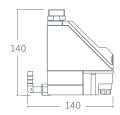

- > Durable and resistant to dirt
- Large valve diameters prevent the formation of emulsions
- > No delicate mechanical components
- > For operation at temperatures up to +60 °C

Easy to install and virtually maintenance-free

Automated operation and monitoring

- Ready for integration into modern system monitoring installations
- Automatic start of self-cleaning process based on dirt load

Dimensions in mm

	Technical data	В	EKOMAT [®] 20	C		BEKO	MAT [®] 20 FM		
the operating manual.	Max. compressor capacity	■ 5 m³/min ▲ 4 m³/min ● 2.5 m³/min							
	Max. refrigeration dryer performance	■10 m³/min ▲ 8 m³/min ● 5 m³/min							
	Max. filter performance	■ 50 m³/min ▲ 40 m³/min ● 25 m³/min							
	Min./max. operating pressure	0.8 16 bar (gauge)							
	Housing	aluminium + plastic, glass fibre reinforced							
	Diaphragm	AU							
	Ambient temperature	+1 °C +60 °C							
	Weight (empty)	0.7 kg							
	Condensate inlet	1 x G¼ (outside) - G½ (inside)							
	Condensate discharge	1 x G¼; hose connector, hose Ø = 8-10 mm (inside)							
	Operating voltage	230 / 115 / / 24 VAC \pm 10%, 50 60 Hz / 24 VDC \pm 10%							
	Power consumption	P < 3.0 VA (W)				P < 8.0 VA (W)			
	Protection class	IP 55							
	Wire cross-section (mains con- nection)	3 x 0.75 mm ² 1.5 mm ² (AWG 1618)							
	Protection	recommended for AC: 1 A slow / mandatory for DC: 1 A slow							
	Contact load	none			max. AC 250 V, DC 30 W / 1A min. DC 5 V / 10mA				
	Condensate	oil-contaminated condensate; oil-free, potentially aggressive condensate							
	Discharge performance								
	Operating pressure bar (gauge)	1 bar	2 bar	3 bar	4 bar	5 bar	6 bar	> 7 bar	
	Max. discharge rate (short-term)* I/h	3.4	3.4 9.9		10.8				
	Ø discharge rate l/h	0.33	0.9	95	1.03				
	Wearing parts kit	4003701				4003701			

Climate – a key factor

· Short-term peak volume can only be achieved if the device is correctly installed according to

The general climate and the ambient temperature are important factors for the formation of condensate in compressed air systems. That is why we quote separate performance data of our BEKOMAT[®] models for three climate zones:

- e.g. Northern Europe, Canada, Northern USA, Central Asia
- ▲ e.g. Central and Southern Europe, Central America

• e.g. South-East Asian coastal regions, Oceania, Amazon and Congo regions Temperature range: 1 to + 60 °C

Do you have questions about the best way of processing your compressed air?

We have the answers! We offer efficient solutions for any type of processing chain. Please contact us with all your queries. We would be delighted to tell you more about our condensate treatment, filtration, drying, measuring and process technology, and our comprehensive services.
