

CLEARPOINT® W with threaded filter connection

Connection of (1)

The connections are adapted to the pipe dimensions of the compressors. The flow-optimised inlet leads to a reduced through flow resistance.

Internal spinner insert (2)

After the compressed air has entered the CLEARPOINT® W, it then comes into contact with special internal spinner insert disc which sets the incoming air flow into a high-speed rotational movement. The consequence: The outwardly aligned centrifugal forces hurl the condensate droplets onto the separator wall, from where they flow downwards into the collection space.

Effective corrosion protection (3)

Accumulating condensate is almost always aggressive and leads to corrosion on unprotected surfaces. CLEARPOINT® W-filter housings are manufactured from seawater resistant aluminium, additionally completely anodised and powder coated on the outside. Corrosion is effectively and permanently prevented.

More safety (4)

The secure locking mechanism provides 100% control when opening the filter housing. If the housing is opened under pressure, then a warning signal sounds. Furthermore, it prevents a release with vibrations.

Rising pipe (5)

A specially designed rising pipe prevents particle transfer to the upwards aligned rotational flow of largely condensate-free compressed air.

Rectifier (6)

The innovative rectifier directs the compressed air to the outlet and reduces flow losses to a minimum.

Shielded collection space (7)

The shielding of the collecting space, by dividing the separator, calms the air flow in this area. This effectively prevents swirling and entrainment of already separated condensates.

BEKOMAT® (8)

More than 60% of the condensate already falls into the water separator. The electronic level-controlled BEKOMAT® ensures reliable discharge.

The Complete Concept for Individual Requirements: CLEARPOINT®-compressed-air filter, water separator and discharge

Flange and thread filters with BEKOMAT®

High pressure filter
up to 50 bar

High pressure filter
100 bis 500 bar

Water separator

The CLEARPOINT®-compressed-air filter is a part of the integrated whole concept for professional compressed air processing. It provides you with all the benefits from BEKO TECHNOLOGIES for more efficiency and added-value capabilities for function-optimised components in conjunction with compromise-free quality.

Higher performance under high pressure

CLEARPOINT®-high-pressure filters are available for an operating pressure of up to 50 bar as well as for 100 to 500 bar. The construction of the filter housing is designed in every detail for the special challenges in high pressure systems and ensures optimum separation efficiency.

Efficient condensate management

CLEARPOINT®-water separators for use on after coolers and refrigeration dryers achieve an efficiency of up to 99% over a wide volume due to their flow-optimised design. As a result, they guarantee the highest possible separation percentages at the lowest cost.

Optimal in double pack

The electronic level-controlled BEKOMAT® 20 FM condensate drain has been specially designed for use in connection with CLEARPOINT®-compressed-air filters. In addition to the well-known reliable separation functions of a BEKOMAT®, this results in additional benefits such as an integrated filter service life time monitoring or transmission of fault indications via a potential-free contact.
